

CycloneIPSEC is an IPsec / IKEv2 library dedicated to embedded applications. IPsec is a suite of protocols used to implement secure communication between two sites over the Internet. IPsec works at the network layer of the OSI model. The main protocols comprising IPsec are AH (Authentication Header), ESP (Encapsulating Security Payload) and IKEv2 (Internet Key Exchange version 2). AH provides data integrity protection while ESP provides both confidentiality and data integrity protection. IKEv2 is the protocol used to manage security associations between two entities.
